

JLINK LTE

JLink LTE is a family of devices designed for organizing a local network between different devices via WiFi, Ethernet, and Bluetooth, connecting to the Internet using 4G cellular digital communication services.

JLink LTE family provides a robust solution linking the field GNSS equipment to RTN, where no cell phone cover is available. JLink LTE devices may contain 1 W either UHF (406 to 470 MHz) or VHF (138-174 MHz), or ISM license free USA band (902-928 MHz) and European CEPT license free (868-870 MHz) radio transceiver. Marine Radiobeacon receiver (283.5 to 325 kHz) can be built-in into JLink LTE device.

JLink LTE can be configured and supported using web-interface through the Internet, and this makes the setup simple and accessible from anywhere in the world.
